

Martin Lippert

SCRIPTED - EMBRACING ECLIPSE ORION

mlippert@vmware.com
@martinlippert

about me

Martin Lippert

Staff Engineer, R&D, at SpringSource/
VMware and lead of Spring Tool Suite
development

Working areas

- Eclipse Tooling for the Spring platform
- Open Source Committer
- Aspect-Weaving for OSGi
- Cloud IDEs and JavaScript
- Agile software development

implementing developer tooling for a long time now

(AJDT, Groovy-Eclipse, Grails IDE, Spring IDE, Cloud Foundry Integration for Eclipse, tc Server Integration for Eclipse, Gradle Integration for Eclipse, add-ons for m2e, Equinox Weaving)

**But how will developer tooling
look like in the future?**

Or

„why is Google able to search the whole web in
10ms and my Eclipse needs 100x longer to open a
type hierarchy“

what happens if you do things differently?

lightweight instead of heavyweight

reusing existing tools

connecting instead of integrating

browser based

cloud hosted

...

Eclipse Orion

„Open Source Platform for
Cloud Based Development“

similar direction

awesome platform

very modular and re-useable

Eclipse Orion

provides a platform for:

navigating files and other content
clone from and push to git repositories
code (editing files)
directly testing (hosting) our app

+

plug-in mechanism

Orion Content

▼ Favorites

You can create favorites by selecting any file or folder in the navigator and choosing 'Make Favorite' from the 'Actions' menu.

▼ Create new content

Click one of the tasks below to create an Orion folder. You can upload, import, or generate files.

Sample HTML5 Site

Generate an HTML5 'Hello World' website, including JavaScript, HTML, and CSS files.

Sample Orion Plugin

Generate a sample plugin for integrating with Orion.

Clone Git Repository

Go to the Orion repositories page to provide a git repository URL. Once the repository is created, it will appear in the Navigator.

Orion 2.0 Release
[\[more info...\]](#)

Client

purely JavaScript
runs in the browser
plug-ins hosted in non-visible iframes

Server

Java (OSGi application)
relatively stupid (no real logic here)
new: node.js-based JavaScript implementation

Introducing

Scripted

a lightweight JavaScript editor
that runs in your browser

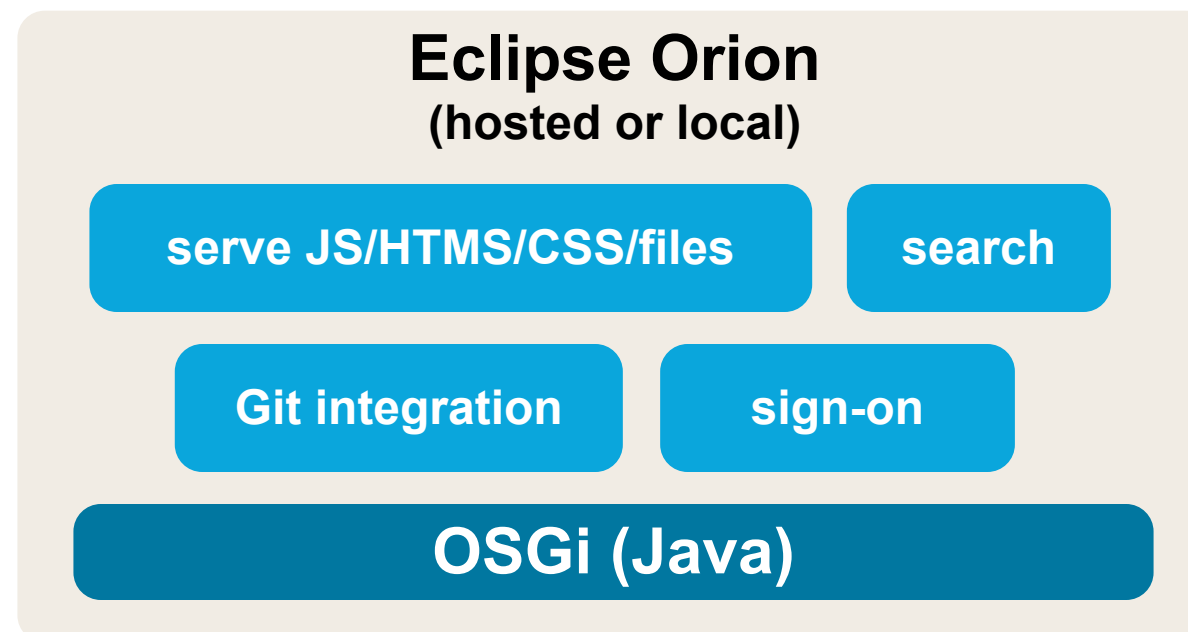

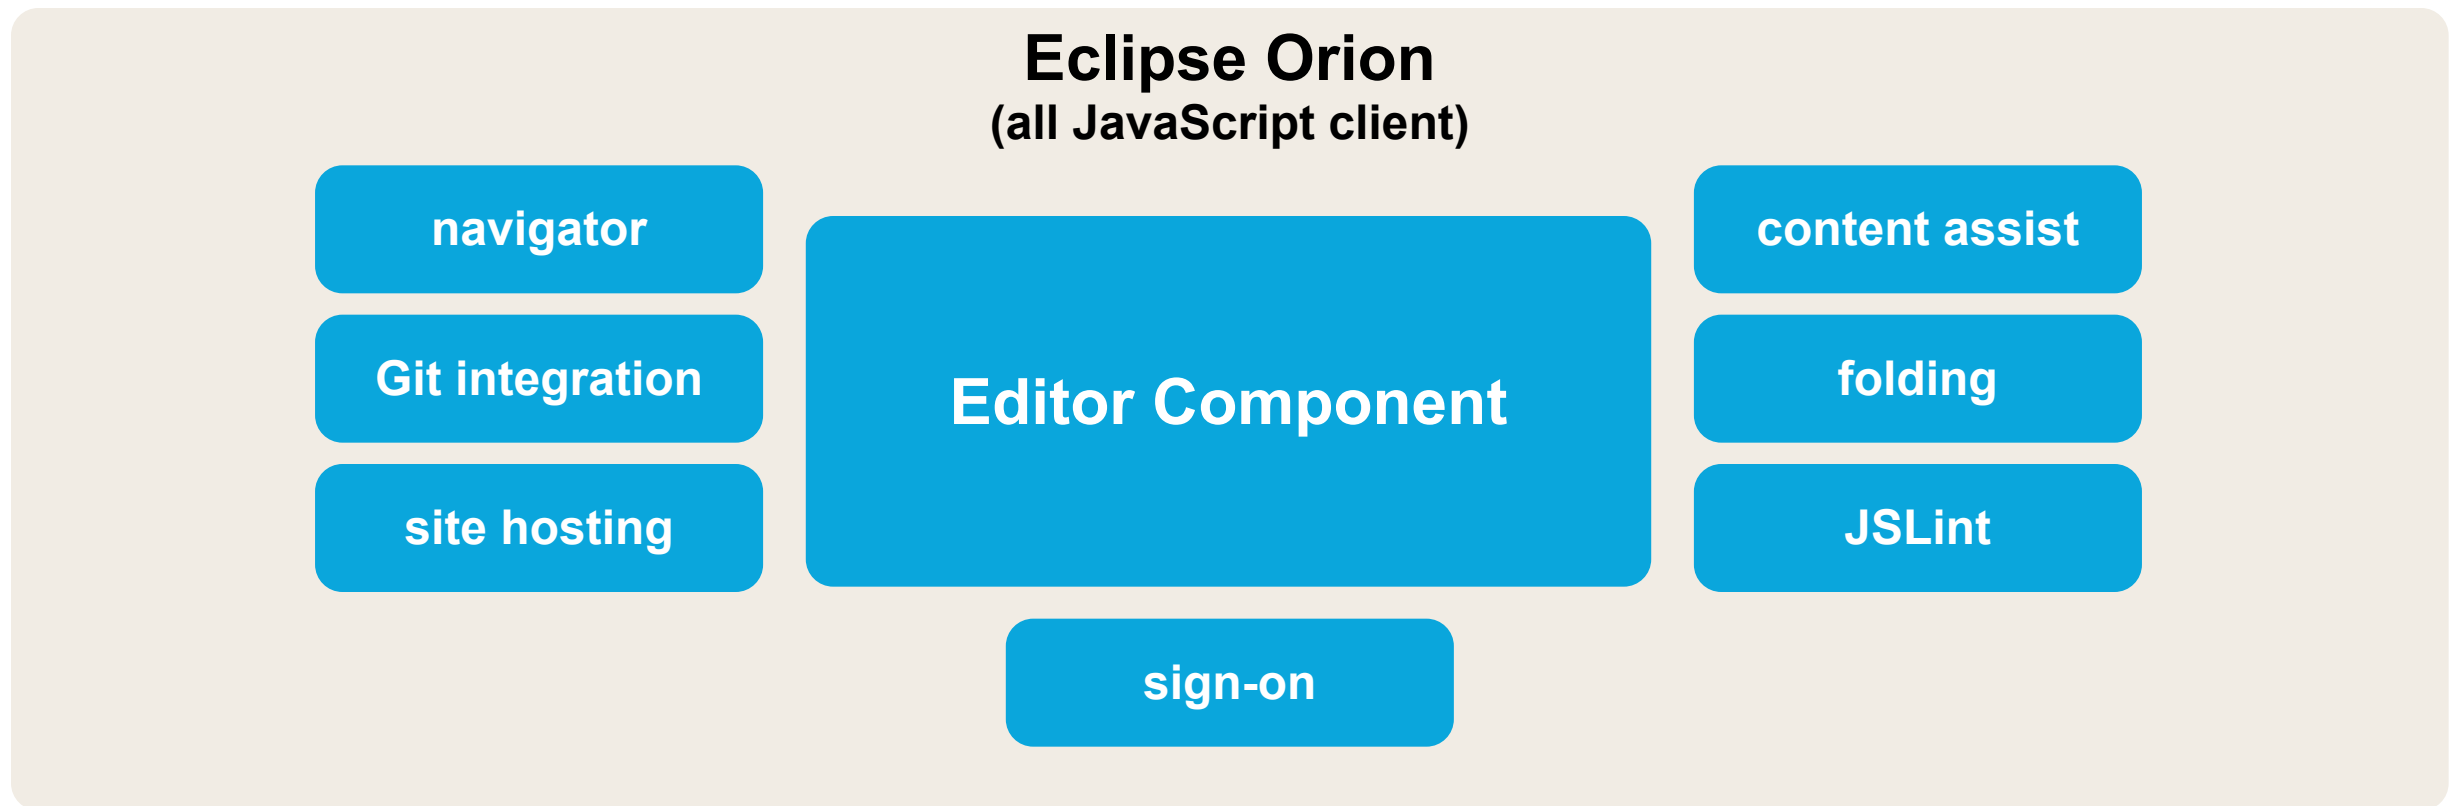

Choices and decisions

focus on editor
lightweight, fast
keystroke driven

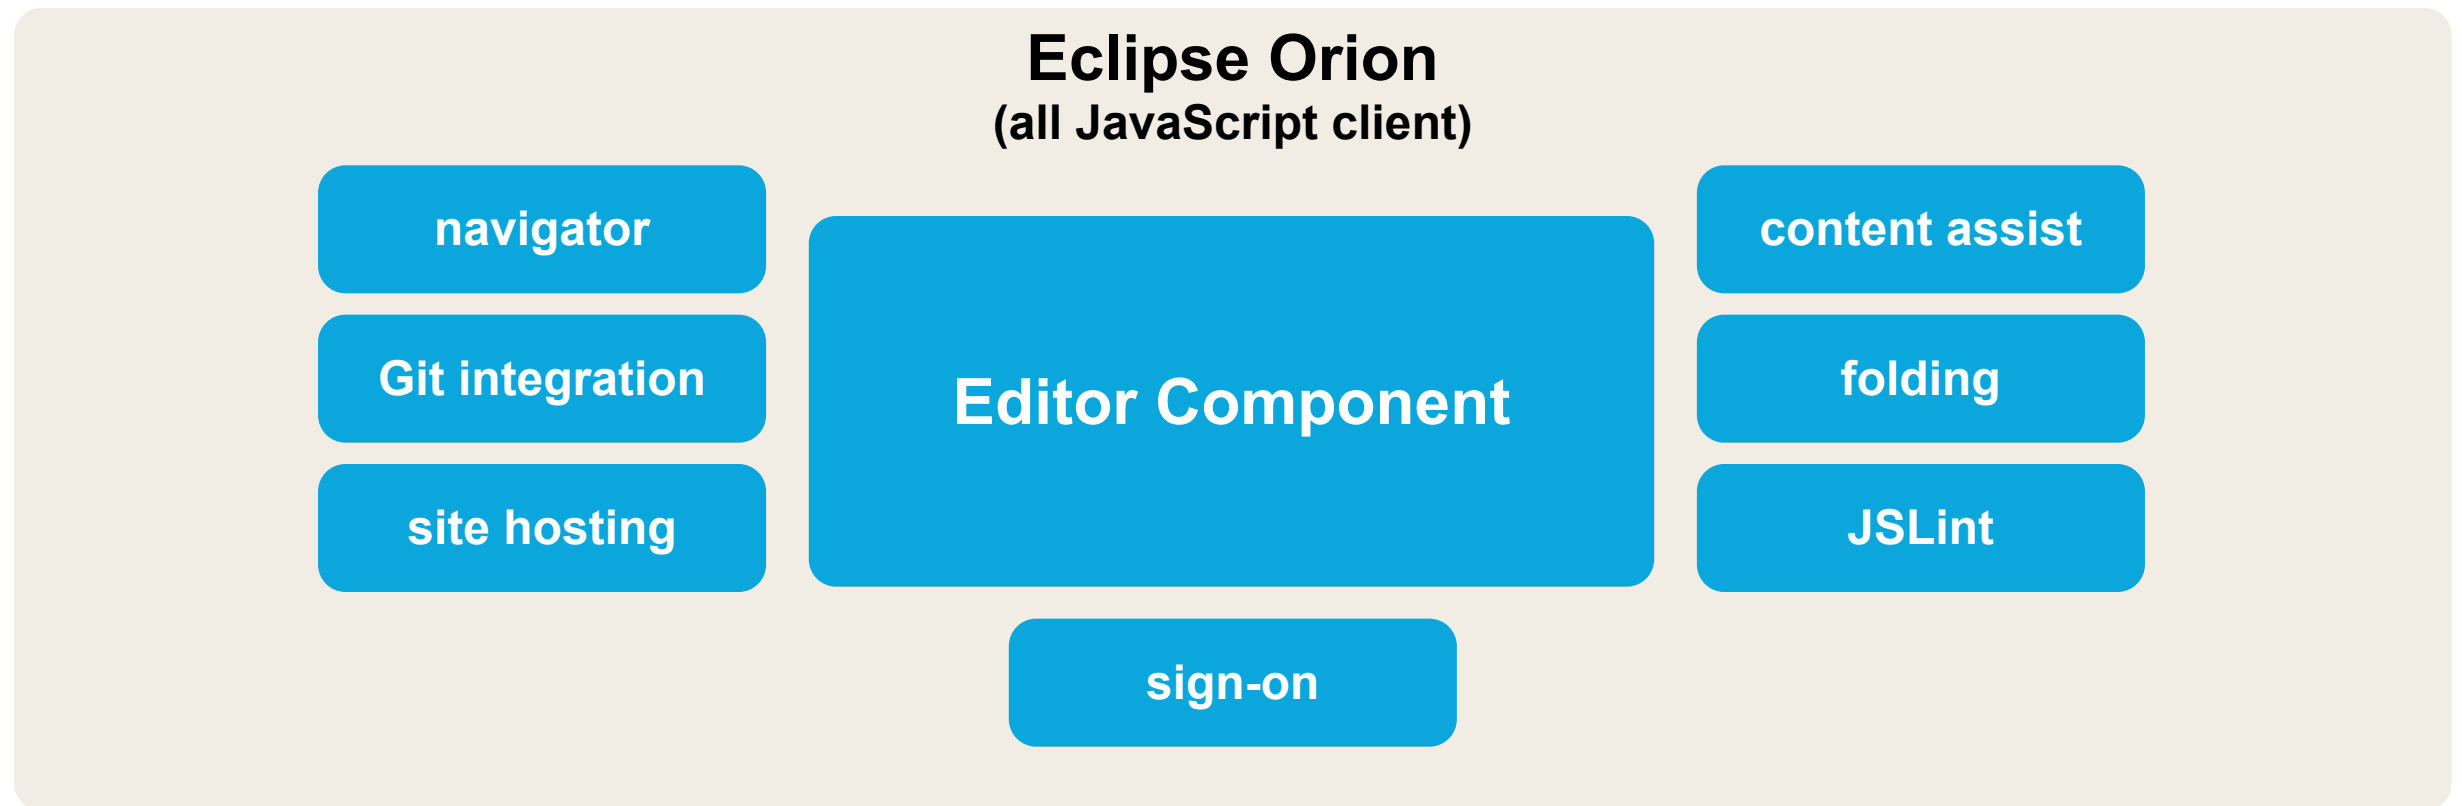

running locally

advanced code comprehension
using inferencing engine
module-aware content-assist

Choices and decisions

Choices and decisions

Demo time...

Summary

Eclipse Orion is an awesome platform for building browser-based tooling

What is next?

continuously contribute back to Orion

add more innovative features

continue to think beyond the borders
